Mehmet Kaan TOPRAK
Senior Frontend Developer

Skills

Frontend

- HTML5, CSS3 (Sass/SCSS, BEM), JavaScript (ES6+), TypeScript
- Responsive design, cross-browser compatibility, pixel-perfect UI implementation

Frameworks & Libraries

- React, Next.js
- State Management: Redux, Redux Toolkit
- UI Libraries: Ant Design, Chakra UI, Bootstrap, Tailwind, Shadcn/ui
- Animations: Framer Motion, ScrollMagic
- Test: Jest

Architecture & Tooling

- Webpack, Module Federation, micro-frontend architectures
- RESTful APIs integration
- Code splitting, lazy loading, performance optimization

Backend & Databases

- Node.js
- MongoDB
- PostgreSQL

DevOps, Cloud & Collaboration

- Deployment processes on Microsoft Azure
- Docker, Git, GitHub
- Jira, Agile/Scrum
- Working closely with designers (Figma) and backend teams

Education

- 2014 - 2019

  International Relations (100% English)

  Atılım Üniversitesi

Languages

English - B1

Turkish - Native

About Me

I am a Senior Frontend Developer who has been primarily working with React and Next.js in recent years, building internal dashboards, e-commerce platforms and admin applications. I focus on micro-frontend architectures (Webpack Module Federation), reusable component-based structures and performance-oriented user interfaces.

I work closely with product, design and backend teams to translate business needs into technical solutions, and I take responsibility both in project setup and in production deployment processes (Microsoft Azure). I care about code quality, readability and sustainable architecture, and I aim to create long-term value in every project I contribute to.

Experience

- Mar 2023 - Present

  Frontend Developer (Senior after Jan 2025)

  P-Tech Solutions

  - Developed an interactive marketing website with the frontend team using Framer Motion and Scroll Magic.
  - Played an active role in the setup and development of a large-scale merchant admin panel.
  - Contributed to frontend development of wallet, campaign and card management modules.
  - Worked in a micro-frontend architecture with Webpack Module Federation, building shared npm packages and reusable components.
  - Took part in Azure deployment processes and Agile workflows managed via Jira, implementing UIs based on Figma designs.

- Nov 2022 - Mar 2023

  Frontend Developer

  Martı Technologies

  - Worked on an internal admin panel project and actively contributed from the initial setup phase.
  - Built a scalable, component-based frontend architecture using Next.js, TypeScript, Sass and the BEM methodology.
  - Implemented global state management with Redux / Redux Toolkit to ensure consistent data flow across complex screens.
  - Collaborated in an Agile environment, participating in sprint planning, daily and review meetings.
  - Integrated RESTful APIs in close cooperation with backend developers and handled error/loading states in a user-friendly way.

- Jan 2020 - Nov 2022

  Frontend Developer

  Maykım Group

  - Contributed to the development of internal company panels and an e-commerce website.
  - Used HTML, CSS, JavaScript, jQuery and React to implement new features and improve existing modules.
  - Built responsive, cross-browser compatible user interfaces aligned with design requirements.
  - Worked on forms, page layouts and UI interactions to enhance the overall user experience.
